

# Juice carton (Tetrapak) Wallet

# 1

Choose your juice carton. Wide ones work best, but the square ones are fine as long as you make them tall enough to fit a bank card in. Cut off the top and bottom of your juice carton and make sure it is thoroughly washed out.

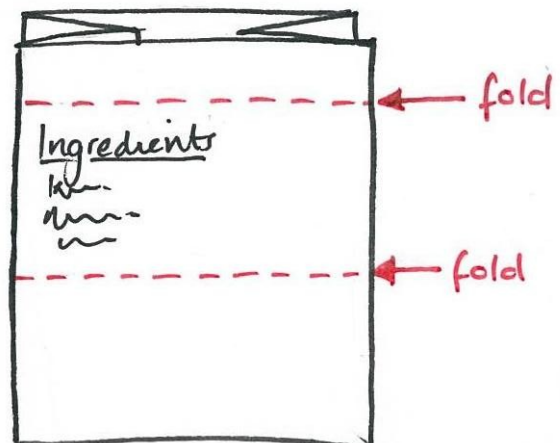

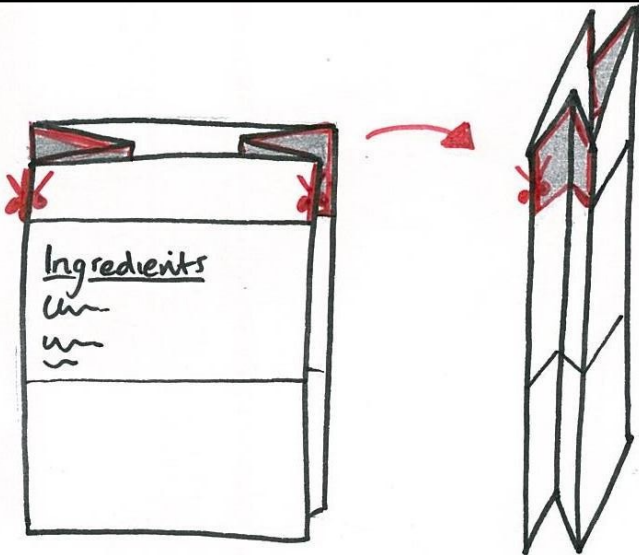

# 2

Fold the sides of your juice carton down the middle to make a valley on each side.

# 3

Decide which side of your juice carton you want as the outside of your wallet. Put that side facing away from you. Firmly fold your carton into three sections: 2 equal sized and one smaller (this one is the flap for securing your wallet)

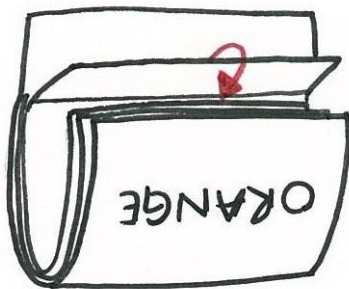

Unfold your pack and then cut both sides off of the smaller section (the shaded bits)

4

5

With the outside of your wallet still facing away from you, cut the edges of the nearest flap off on a slight diagonal.

Fold your pack back up and tuck the flap you just cut into the opening that was the bottom of the carton.

The remaining flap is the front of your wallet. Shape it as you want and secure it with a rubber band.
